

# Liouville's Theorem (Differential algebra)

Vanya Vorobiov

Sber

January 14, 2025

## Remark

Through the all of presentation we will suppose that all fields have 0 characteristic.

## Remark

Through the all of presentation we will suppose that all fields have 0 characteristic.

## Definition

Field  $F$  is differential if it's equipped with the unary function  $'$  such that:

- ▶  $(a + b)' = a' + b'$
- ▶  $(ab)' = a'b + ab'$

## Remark

Through the all of presentation we will suppose that all fields have 0 characteristic.

## Definition

Field  $F$  is differential if it's equipped with the unary function  $'$  such that:

- ▶  $(a + b)' = a' + b'$
- ▶  $(ab)' = a'b + ab'$

## Definition

Subfield  $K \subseteq F$ ,  $K = \{a \in F \mid a' = 0\}$  is called subfield of constants.

## Remark

Through the all of presentation we will suppose that all fields have 0 characteristic.

## Definition

Field  $F$  is differential if it's equipped with the unary function  $'$  such that:

- ▶  $(a + b)' = a' + b'$
- ▶  $(ab)' = a'b + ab'$

## Definition

Subfield  $K \subseteq F$ ,  $K = \{a \in F \mid a' = 0\}$  is called subfield of constants.

## Definition

Differential extension of the differential field  $F$  is field  $E$  such that  $E \supseteq F$  and there is the same differentiation  $'$  on  $E$ .

## Remark

Through the all of presentation we will suppose that all fields have 0 characteristic.

## Definition

Field  $F$  is differential if it's equipped with the unary function  $'$  such that:

- ▶  $(a + b)' = a' + b'$
- ▶  $(ab)' = a'b + ab'$

## Definition

Subfield  $K \subseteq F$ ,  $K = \{a \in F \mid a' = 0\}$  is called subfield of constants.

## Definition

Differential extension of the differential field  $F$  is field  $E$  such that  $E \supseteq F$  and there is the same differentiation  $'$  on  $E$ .

## Definition

Let  $F$  be the differential field. Then

- ▶  $b$  is called the logarithm of  $a$  if  $b' = \frac{a'}{a}$
- ▶  $b$  is called the exponent of  $a$  if  $a' = \frac{b'}{b}$

# What is integrability in elementary functions

Liouville's  
Theorem

Vanya Vorobiov

Basic definitions

What is  
integrability in  
elementary  
functions

## Definition

The extension  $E$  of  $F$  is called elementary if it can be presented as  $E = F(t_1, \dots, t_n)$  and for all  $i$   $t_i$  is logarithm or exponent or algebraic over  $F(t_1, \dots, t_{i-1})$ .

# What is integrability in elementary functions

Liouville's  
Theorem

Vanya Vorobiov

Basic definitions

What is  
integrability in  
elementary  
functions

## Definition

The extension  $E$  of  $F$  is called elementary if it can be presented as  $E = F(t_1, \dots, t_n)$  and for all  $i$   $t_i$  is logarithm or exponent or algebraic over  $F(t_1, \dots, t_{i-1})$ .

## Remark

Common sense say us that any function  $f : \mathbb{C} \rightarrow \mathbb{C}$  is elementary iff it can be constucted via finite number of radicals, sines, cosines, exponents, logarithms and hyperbolic functions. One can see that it's consistent with our approach.
