# Basic definitions

<1-> Through the all of presentation we will suppose that all fields have 0 characteristic.

# Basic definitions

<1-> Through the all of presentation we will suppose that all fields have 0 characteristic.

## Definition

Field F is differential if it's equipped with the unary function $'$ such that:

- $(a + b)' = a' + b'$
- $(ab)' = a'b + ab'$

# Basic definitions

<1-> Through the all of presentation we will suppose that all fields have 0 characteristic.

## Definition

Field F is differential if it's equipped with the unary function $'$ such that:

- $(a+b)' = a' + b'$
- $(ab)' = a'b + ab'$

## Definition

Subfield $K \subseteq F$, $K = \{a \in F \mid a' = 0\}$ is called subfield of constants.

# Basic definitions

<1-> Through the all of presentation we will suppose that all fields have 0 characteristic.

## Definition

Field F is differential if it's equipped with the unary function $'$ such that:

- $(a + b)' = a' + b'$
- $(ab)' = a'b + ab'$

## Definition

Subfield $K \subseteq F$, $K = \{a \in F \mid a' = 0\}$ is called subfield of constants.

## Definition

Differential extension of the differential field F is field E such that $E \supseteq F$ and there is the same differentiation $'$ on E.

# Basic definitions

<1-> Through the all of presentation we will suppose that all fields have 0 characteristic.

## Definition

Field F is differential if it's equipped with the unary function $'$ such that:

- $(a+b)' = a' + b'$
- $(ab)' = a'b + ab'$

## Definition

Subfield $K \subseteq F$, $K = \{a \in F \mid a' = 0\}$ is called subfield of constants.

## Definition

Differential extension of the differential field F is field E such that $E \supseteq F$ and there is the same differentiation $'$ on E.

## Definition

Let F be the differential field. Then

- b is called the logarithm of a if $b' = \frac{a'}{a}$
- b is called the exponent of a if $a' = \frac{b'}{b}$

# What is integrability in elementary functions
